

HackerRank Assessment

Welcome!

We're excited to

have you interview

with our team.

For your upcoming HackerRank assessment, we want to ensure you're adequately prepared for each step of the process.

HackerRank Assessment

The HackerRank test is the first level of assessment when you appear for the Software Engineer Intern role. It is a 90-minute proctored test that has 3 coding questions to solve. These questions are based on the concepts of Data Structures and Algorithms. Keep a check on time and code efficiency while working on the solutions.

Follow this link to attempt [Atlassian Practice Test](#).

Before starting the test, go through [Browser Recommendations for Test](#) and [Status Check](#) your system settings. For any questions, reach out to eventsupport@hackerrank.com.

How to prepare:

Problem Solving

There are 3 coding questions. Before starting, skim through all the questions and decide the order of solving. It's recommended to solve them in ascending order of difficulty or time. Try to attempt all the questions even if you don't know the complete solution as the test has partial marking on.

Time Management

HackerRank challenges are timed, so it is essential that you are in a calm, focused environment where you won't be disturbed. Once the test timer is started, it cannot be paused. Try to minimize the time spent switching between problems and ensure that your solution is final so you won't have to revisit it.

Answering Coding Questions

Before jumping to code, try to understand the problem statement thoroughly, write clean and readable code and don't forget to test your code with multiple inputs to check its robustness. The test is language agnostic. Feel free to use the language you feel most confident using (such as C, C#, C++, Javascript, Python, Java, Go, and many others).

Plagiarism and Proctoring

The test will be proctored, you should ensure that you have a stable internet and a fully functional webcam.
